

What we still need from you

Quality Konnection Construction

Your website is built and running. The pages are written, the structure is in place, and it is live for review.

What is missing is your information. The site was deliberately built so that anything we have not confirmed with you simply does not appear — there are no placeholder phone numbers, no invented dates, no made-up credentials sitting on the site waiting to be corrected.

That is the right way round, but it does mean the site cannot generate a single phone call until the items in Section 1 are answered.

How to use this document

Write your answers in the boxes. You do not need to answer everything at once, and you do not need to know the technical items — skip anything you are unsure about and we will chase it down. **Section 1 is the one that matters most.** Everything after it makes the site stronger; Section 1 makes it work at all.

SECTION	WHAT IT COVERS	ITEMS
1	Before the site can launch	5
2	You, and the business	8
3	Credentials and insurance	6
4	Contact details and hours	7
5	Google and social profiles	6
6	Warranty and financing	3
7	Photographs	3
8	How you like to work	5

Section 1 — Before the site can launch

These five block everything else. Until they are answered the website cannot take a phone call or a form enquiry, and it should not be advertised anywhere.

Why the site currently has no phone number on it

We were not given one, and the build refuses to invent one. Rather than putting a placeholder on the page and hoping it gets replaced before someone calls it, the phone simply does not display anywhere. The moment you give us a number it appears on every page at once.

1. What web address (domain) should the site use?

This has to be settled before launch. Every page address, every link Google stores, and every piece of behind-the-scenes code points at this. Changing it later means redoing all of it. If you already own a domain, tell us the exact spelling and where it was bought.

e.g. qualitykonnektionconstruction.com - and whether you already own it

2. What is the exact legal name of the business?

As registered with the State of Texas, including LLC, Inc. or similar. This has to match your Google listing and your insurance certificates exactly, character for character.

Legal entity name

3. What phone number should customers call?

Ideally a dedicated business line rather than a personal mobile, because this number will end up on Google, on directories and on other people's websites, and it is very hard to change once it spreads. If a personal number is what you have for now, that is fine - tell us and we will use it.

Main number / is this a dedicated business line?

4. Where should enquiries from the website go?

A website cannot send email by itself. It has to hand the enquiry to something. If you already use software to track jobs and leads (JobNimbus, AccuLynx, Jobber, HubSpot and similar), we plug the site into it so leads land where you already work. If you use nothing yet, say so and we will recommend the simplest option.

Software you use, or 'none yet' - and the email address enquiries should reach

5. What email address should we publish?

This is the address that goes on the site and on your Google listing.

e.g. info@yourdomain.com

Right now the contact page shows no enquiry form at all

That is deliberate. A form that quietly loses enquiries is worse than no form, so until we know where leads should go, the page tells visitors to call instead. Answering items 3, 4 and 5 turns the contact page on.

Section 2 — You, and the business

Google and customers both reward a real, named person standing behind the work. At the moment the site has no owner, no history and no face, which is the single largest gap in how trustworthy it looks.

6. What year was the business founded?

We will not write 'serving the Valley for over 20 years' or anything like it until we have a real year from you.

Year

7. How many years have you personally been in the trade?

This can be longer than the business has existed, and often is. It is worth saying so, because it is genuine experience that the site currently cannot claim.

8. Who is the named expert for the site - full name and job title?

One named person whose voice runs through the whole site, with their own page. Usually the owner. Nothing about this person appears anywhere until you confirm it.

Name Title, e.g. Owner & Project Superintendent

9. A short introduction in that person's own words - three or four sentences.

How you got into the trade, what you focus on, and what you want a customer to know before they call you. Plain speech is better here than polished marketing. Write it however you would say it and we will tidy the spelling, not the voice.

10. Can we have a photograph of that person?

A real photograph on site or with a truck works far better than a studio portrait. It does not need to be professional.

Yes / no - and how you will send it

11. Is the service list on the site complete and correct?

The site currently advertises dirt work, site preparation, building pads, land clearing, excavation, grading, cut and fill, fill dirt hauling, trenching, backfilling, compaction, drainage and site shaping, road and driveway preparation, utility excavation, large-scale earthmoving and commercial site development; plus roof replacement and repair, metal, asphalt shingle, flat and low-slope, TPO, modified bitumen, commercial, residential, storm and wind damage, leak detection, decking and structural repairs, flashing, new construction roofing and preventative maintenance. Tell us anything on that list you do NOT do, and anything you do that is missing.

Anything to remove, or anything missing

12. Is the service area right?

We currently cover Cameron County, Willacy County and the eastern edge of Hidalgo County, and we deliberately do NOT claim McAllen, Edinburg, Mission, Pharr or Progreso. Tell us if you want that boundary moved either way.

13. How far will you travel, and does distance change your price?

Useful for setting expectations honestly on the location pages.

Section 3 — Credentials and insurance

This is where the site can beat every competitor in the market, because almost none of them publish anything checkable. We will not publish any of it until you confirm it.

Important: Texas does not license roofing contractors

There is no state roofing licence in Texas, for anybody. The site says this openly, because it is true and because it is genuinely useful to your customers. It also means we will never describe the company as simply 'licensed' - if you hold the industry credential below, we state exactly what it is and who issues it.

14. What is your Texas entity filing number?

From the Secretary of State. It lets a customer confirm the business is real in about thirty seconds, which very few competitors allow.

Filing number

15. Do you hold the RCAT Licensed Roofing Contractor credential?

The Roofing Contractors Association of Texas credential. It is voluntary, not a state licence, and it requires an exam, annual training and minimum insurance. If you hold it, tell us the number, whether it is residential or commercial, and the tier. If you do not, that is completely fine and we will simply not mention it.

Number / category / tier - or 'no'

16. Who is your general liability insurer, and what is the limit?

You can decide whether the limit is displayed publicly or just held on file. Either way we need to know it is in place. Please also tell us whether you carry workers compensation, because customers increasingly ask.

Carrier / limit / workers comp yes-no / publish the limit publicly yes-no

17. Do you hold any manufacturer certifications?

GAF, Owens Corning, Mule-Hide, Carlisle, or others. These are real, checkable and often allow better warranties, so they are worth listing.

18. Do you work with a particular windstorm inspector or engineer?

You cannot certify windstorm work yourself - nobody's contractor can - so knowing who you normally work with helps us describe your process accurately.

19. Are you registered as a DBE, HUB, SBE or similar?

These matter for public and commercial contracts and are worth surfacing if you hold them.

Section 4 — Contact details, address and hours

These feed your Google listing as well as the website, and the two have to match exactly.

20. Do you have a business address you are willing to publish?

Be careful here. If you run the business from home, publishing that address puts your home address into permanent public circulation. Many trades businesses are better registered as a service-area business with no address shown. Tell us which you want and we will set it up correctly.

Full address, OR 'service area only - do not publish an address'

21. Is there a yard, shop or office a customer could actually visit?

Different question from the one above. A real visitable location changes how we set up your Google listing.

22. Is there a second phone number - office, or after hours?

23. What are your normal business hours?

Day by day. If it varies by season, tell us that too.

Mon-Fri Sat Sun

24. Do you genuinely answer the phone after hours for storm damage?

Answer this honestly. If the site promises emergency response and nobody picks up at nine at night, that turns into a bad review very quickly. If you do answer, it is a real advantage worth featuring.

Yes / no / sometimes - and roughly what hours

25. How quickly do you normally respond to a new enquiry?

Setting an honest expectation on the contact page beats saying nothing.

26. Who in the business should receive website enquiries day to day?

A name and a contact, so leads do not sit unread.

Name / how they should be notified

Section 5 — Google and social profiles

For a local trades business, the Google Business Profile is usually worth more than the website itself. The two work together, and neither performs well alone.

Reviews are the one thing that cannot be rushed

Everything else in this build can be finished in weeks. Review count cannot. Competitors in this region have built hundreds of reviews over years, and that is the single hardest gap to close. The most valuable thing you can start doing today, before the site is even finished, is asking every satisfied customer for a Google review.

27. Do you have a Google Business Profile, and is it verified?

If yes, send us the link. If no, this should be your first priority after the phone number, ahead of almost anything else on this list.

Link, or 'not set up yet'

28. Roughly how many reviews do you have today, and where?

Google, Facebook, anywhere else. We will not publish a rating or a count on the site - those must come from the live profile, never typed in by hand - but we need to know where you are starting from.

29. Facebook page?

Link

30. Instagram?

Link

31. LinkedIn or YouTube?

Links

32. Are there any other listings or directories you already appear on?

Chamber of commerce, supplier directories, contractor lists. These help Google connect the business up.

Section 6 — Warranty and financing

The site currently describes how warranties work in general, but cannot state yours.

We will not publish the word 'lifetime' on its own

Unqualified lifetime warranty language is common in this trade and is very hard to stand behind. A named warranty with written terms is stronger, more defensible, and more persuasive to the kind of customer who reads carefully. Give us real terms and we will present them well.

33. What warranty do you offer on roofing workmanship?

A specific period and what it covers. This is your own warranty on the installation, separate from the manufacturer's warranty on the materials.

e.g. 2-year workmanship warranty on roof replacements - and what it excludes

34. What warranty do you offer on dirt work?

Compaction, drainage and grading work.

35. Do you offer financing, and through whom?

If so, the provider and the terms you are comfortable publishing.

Section 7 — Photographs

This is the biggest visible weakness in the site right now, and the easiest one for you to fix from your own phone.

We will not use stock photography

Generic photographs of roofs that are obviously not in South Texas actively damage credibility with local customers, who can tell. We would rather leave a space empty than fill it with a picture of a house in Colorado. Your phone photos of real local jobs are worth more than any stock library.

36. Can you send photographs of completed jobs?

Before and after pairs are the most valuable. Please tell us roughly where each job was, because we match photographs to the town page they belong to.

How many, roughly - and how you will send them

37. Can you photograph work in progress from now on?

Open decking, fastening patterns, pads being compacted, equipment on site. These are genuinely hard to obtain later and they demonstrate competence better than a finished roof does.

38. Do you have a logo file, and who created it?

We need the original artwork rather than a screenshot, if it exists. Also tell us whether you have vehicle graphics, signage or business cards we should match.

Section 8 — How you like to work

Not needed for the site to function, but these shape how honestly and specifically it can describe your process - which is where it beats competitors.

39. On a coastal roof replacement, who normally files the windstorm application?

You, the customer, or the inspector? It has to go in before work starts, and the site currently explains that in general terms. Knowing your actual practice lets us describe your process rather than the industry's.

40. Do you require a deposit, and how do you structure payments?

The site advises customers to be wary of large up-front payments. We should make sure that advice does not accidentally describe your own terms.

41. What kind of job do you most want more of?

Residential re-roofs, commercial low-slope, industrial pads, subcontract work for builders? We will weight the site toward it.

42. What kind of job would you rather not be called about?

Equally useful. Filtering out enquiries you do not want is worth as much as attracting the ones you do.

43. Is there anything you are known for locally that we have missed?

A particular type of job, a piece of equipment few others have, a relationship with a builder or supplier, work at the port or on the island.

Anything you are not sure about, leave blank

A blank is safe. The site is built so that unanswered items simply do not appear - no placeholder text, no half-finished sentence, nothing for a customer to trip over. What we cannot do is guess, because a plausible guess on a construction website is exactly the kind of thing that becomes a problem later.

Appendix — For whoever maintains the site

The 38 outstanding technical fields, and where each answer above lands. Run 'node scripts/pending.mjs' at any time for the current list.

QUESTION	FIELD IN src/data/business.ts
2	legalName
3	phoneE164, phoneDisplay
4	crmFormEmbedUrl, formActionUrl
5	email
6	foundingYear
7	expert.yearsExperience
8	expert.name, expert.role, expert.slug
9	expert.bio
10	expert.photo
14	credentials.texasEntityNumber
15	credentials.rcatNumber
16	credentials.generalLiability
17	credentials.manufacturerCerts
18	credentials.tdiAffiliation
19	credentials.registrations
20	address.street, street2, city, postalCode; geo.lat, geo.lng
22	phoneSecondary
23	hours
24	emergencyService
27	gbpUrl, reviewUrl
28	aggregateRating (derived from the live profile only)
29-31	social.facebook, social.instagram, social.linkedin, social.youtube
33	warranty.workmanshipTerm
34	warranty.dirtWorkTerm
35	financing

Three items are computed rather than supplied

geo.lat / geo.lng are derived from the address once question 20 is answered. **expert.slug** is derived from the expert's name. **aggregateRating** is pulled from the verified Google Business Profile and must never be typed in by hand — a

rating entered manually on a business's own website does not produce star ratings in search results and creates a real credibility problem if it does not match the live profile.

Separately outstanding, not owner questions

These are calls to make to public authorities rather than things the owner can answer, and the site currently states each one as an open gap rather than guessing:

- Willacy County windstorm zone assignments — the county is confirmed inside the catastrophe area, but the per-town zones were not verified against the primary map.
- Adopted building code editions for Brownsville, South Padre Island and unincorporated Cameron County. Only Port Isabel is confirmed, at the 2018 I-codes.
- Cameron County Drainage District No. 1 discharge rates and fees — an updated master plan supersedes the figures on file and needs to be read before any number is published.
- South Padre Island and Cameron County freeboard requirements above base flood elevation.
